

Star Trek: Armada Maps

For the game *Star Trek: Armada* quite a number of maps were made. The game already includes 28 [standard maps](#) by default. They range from 1 vs 1 maps to full sized 8 player maps. Custom missions are also possible.

Traditionally maps are named with a leading digit indicating the number of available player slots. Technically speaking, the *StartLocations* value would suffice to indicate the player slots. But the naming convention allows for getting this information with a quick glimpse. In-game you can filter for the number of players.

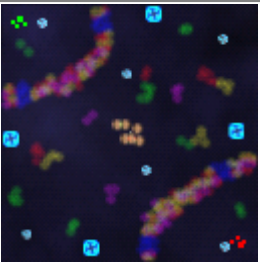

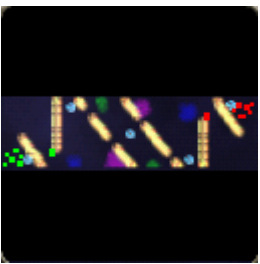

There are a lot of custom maps and that can become a problem: Maps all have to be placed in the *addon* directory of the Armada installation. However, if you have too many of them, Armada crashes every time you try to create a server. It doesn't matter whether it's **Internet**, **Instant Action**, or via **Local Area Network**. It has also been reported, that placing maps inside the *bzn* folder (where the original/standard maps are located) may make the game crash.

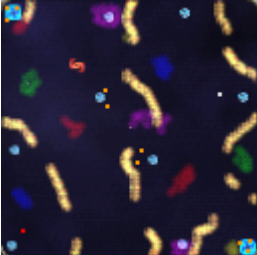

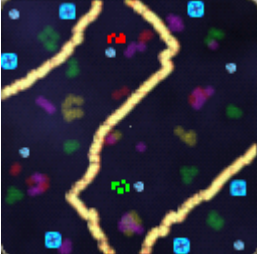

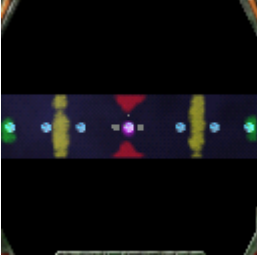

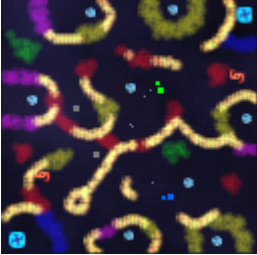

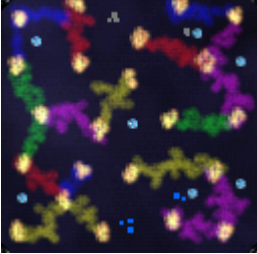

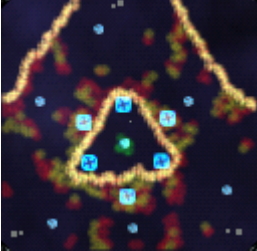

Automatic Map Downloads

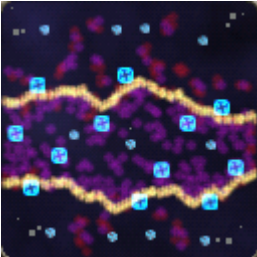

If a player does not have a map the host is using, the client downloads it automatically from the host. And that works rather fast, especially since Armada maps are not excessively large. So don't panic if you are hosting and want to use an exotic map. Just select it and you're good to go. The rest is done by Armada itself. In the meantime you're not hindered by the download. You can see the download status as well.

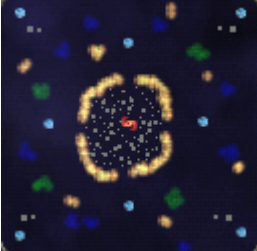

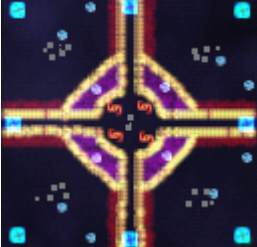

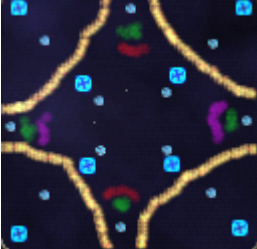

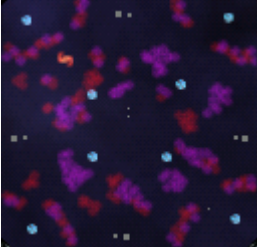

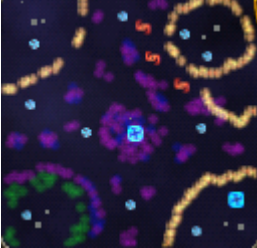

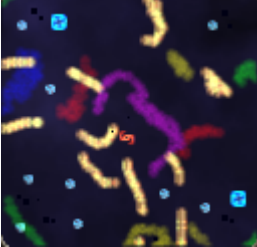

Standard Maps

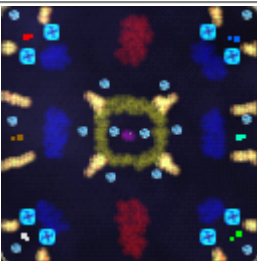

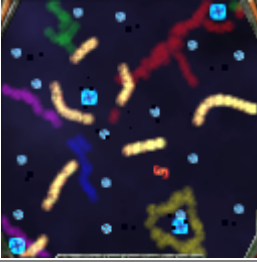

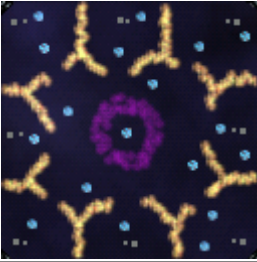

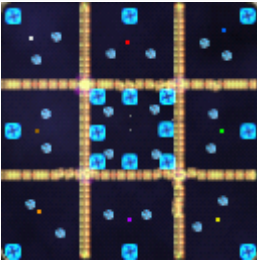

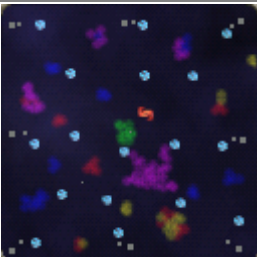

There are 28 maps shipped with Armada.

Map Name	Picture	Note
2blue		
2borders		This map can turn out to be highly unfair for the player starting out on the left side. E.g. when starting as a Borg player, the first Processing Node cannot be placed in the vicinity of the moon at the starting location. This effectively gives a hard disadvantage for having either to produce more than two additional Dilithium Collectors to max out the moon or head out to the next one in a distance. The player starting out on the right does not have this impediment. This map is therefore not fair.

Map Name	Picture	Note
2deadzone		
2divide		
2duel		
2hidden		
2maze		
3race		
3triad		

Map Name	Picture	Note
4across	 A map with a central purple and yellow wavy pattern, surrounded by blue and red dots.	
4brown	 A map with a central yellow square pattern, surrounded by blue and red dots.	
4crux	 A map with a central purple and yellow cross pattern, surrounded by blue and red dots.	
4first	 A map with a central purple circle pattern, surrounded by blue and red dots.	
4green	 A map with a central yellow cross pattern, surrounded by blue and red dots.	
4hole	 A map with a central yellow and purple pattern, surrounded by blue and red dots.	
4hub	 A map with a central blue and yellow circular pattern, surrounded by blue and red dots.	

Map Name	Picture	Note
4junky		
4mama		
4more		
4nirvana		
4redsea		
4strange		
5assault		

Map Name	Picture	Note
6brown		
6violins		
8compete		
8nirvana		
8open		

On the map *4junky* a lot of empty ships are placed at the center. Two of them, a [Galaxy](#) and the [Premonition](#) are sucked into the [Black Hole](#) right at the binning.

Map Editor

There is [an editor for the game's maps](#). With the [patch 1.3](#) you can reach it very easy by entering edit into the chat console when in-game.

BMP Format of Preview

The map preview is stored as a 24 bit Windows Bitmap (BMP file). If for some reason a map does

make the game crash when using it, the BMP may be the cause for it. If you can verify that this is the case (e.g. move the BMP out of the *bnz* or *addon* folder and it does not crash any longer), check out whether the file can be opened with a graphics editor, e.g. *MS Paint* or *Gimp*. If so, then it's probably only stored in the wrong format. BMPs come in different formats. A valid BMP for Armada map previews **must** be in 24 bit depth. You may find graphics editors trying to store the file actually in 32 bit depth, which makes the game crash. If you cannot open it with a common graphics editor, then it's very likely corrupted and obtaining a working version is unavoidable.
