- Internet play: yes
- LAN play: yes
- Lobby search: yes
- Direct IP: yes
- Play via [Gameranger](#): untested
- [Coop](#): yes
- Singleplayer campaign: yes
- Hotseat: no

Forged Alliance is a stand-alone addon for [Supreme Commander](#), developed by [Gas Powered Games](#) and released by [Square Enix](#) on 29.9.2011. The game mechanics follows the [Total Annihilation Mechanics](#). Basically it is an independent game, but it continues the story line of Supreme Commander: Black Sun has been activated. This activation also made it possible for the Seraphim, who had long been considered extinct, to open a quantum fissure through which they completely bombed Earth in a devastating first strike. Out of necessity, the three factions of the predecessor, Aeon, Cybran and UEF, work together in a joint alliance against the Seraphim.

For the multiplayer this means on the one hand another faction that you can play. On the other hand there are a few new units. FA is therefore to be preferred for the multiplayer.

Purchasing

The game is still distributed via [Steam](#) and [GOG](#). However the GOG version is only LAN/VPN play capable.

Versions

There are two major version types, the Steam version (2019-02-09: current version 1.6.6) and the DVD version (latest version is 1.5.3599). According to several internet sources, you can also download the game with the CD key of the DVD version from Steam, but then with the newer version 1.6.6. Both versions are savegame compatible with one another (you can load and play the Steam version with the DVD version and the other way around), but they do not allow a shared network game (connection fails). Likewise, they are not replay-compatible (in either direction).

Installation

Essentially the usual way: Install from DVD, patch, if necessary copy a crack over it. Alternatively, run the Steam installation. The DVD game can also be started from a copied folder if you have already backed it up or from a previous Windows installation. The patch 1.5.3596 to 1.5.3599 cannot be applied anymore, even if you specify the directory where FA is located. The patch also doesn't work with the cracked version 1.5.3596. Version 1.5.3599 doesn't seem to contain a DVD query anymore. A crack is therefore no longer necessary with this version. Therefore, the recommended procedure for the DVD version is to install the game including the patch and to save it if you don't want to install it again later.

Both versions are playable up to and including Win 10.

Troubleshooting

The game is known to cause problems with Nvidia drivers of version 460.79 or later. Game stutters and frames are dropping. There are three different approaches you can try, that might help you with that problem:

1. Install Nvidia drivers *older* than version 460.79,
2. enter `d3d_WindowsCursor` into the console (on German keyboards, use `ö` to open it, you can use the Nvidia Fix mod from the FAF client, too) or
3. open your services menu via `services.msc` and stop & disable the **NVDisplay.ContainerLocalSystem** service.

Multiplayer

Comparison to the Base Game

Compared to [Supreme Commander](#) the economy is somewhat faster. The units themselves are just as fast, only the construction is faster. Some units are new (e.g. automated construction buildings). However, not much has changed in the core gameplay.

Plain Game Versions

LAN

The game works kind of well via LAN, provided, everyone uses the same version. Still, sometimes you simply cannot find an open match. Another problem can be the inability to join an open match, where already two players are connected. It manifests itself in form of a message, that certain players cannot connect to each other, while the hosting computer could obviously be reached.

WAN

Via internet is a whole different story. In short, you cannot play the DVD version via Internet without any [VPN](#) tools, and even then the above mentioned problems for LAN play may occur. You certainly cannot use the official lobby servers with the DVD version any more, as the GPG net was shut down a while ago. However, this goes not for the Steam version (they run their own lobby servers). For a while those were down. At the moment (January 2022) the Steam version works very well without any additional tools or tweaks. Simply click on *Matchmaking* in the main menu, and go from there.

Forged Alliance Forever

There is also an alternative in form of <https://www.feforever.com/>. The set up a new lobby server. But there are the following requirements to be met first:

1. You *need* the [Steam](#) version,
2. you need an account with FAF,
3. you need to link that account to your Steam account. Remember requirement 1...
4. You need to use their client software as well.

Once you start and configure the client software, you are good to go. The FAF client has some features, that make it worth the effort:

- An in-lobby map deposit,
- co-op mode,
- game mods,
- Elo score like ratings and of course
- lobby server via internet.

AI and Nukes

Some might have the impression, that the AI never uses nukes. That is not true! They actually do, but usually not earlier than one hour into the game. They are then thrown at the commander. But not all of the AIs do. Current situation looks like this:

AI Type	Uses Nukes
Easy	no
Normal	no
Adaptive	yes
Rush	yes
Turtle	yes
Tech	yes

As written above, the AI needs some time to get to the point, where it throws strategic missiles at you. In one match this was as early as 46 Minutes (game time).

Extracting Asset Files

The game comes with quite a substantial number of asset files, like music, textures and so on. These files are located in the game folder, in subfolders like *sounds*, in form of *.xwb files. These are Xbox archive files, that can be extracted with the proper tools. One of those tools is Luigi Auriemma's *unxwb*, which you can download here: <http://aluigi.altervista.org/papers.htm#unxwb>. You can use it as a command line tool or start it with a simple double click. It will then ask you for the file to be extracted and the target folder where the contents are supposed to be extracted to.

Note: Especially the audio files (e.g. *Music.xwb*) come as RIFF WAV files (PCM signed 16 bit low endian format, PCM S16 le). Audio players should work with those just fine.

Network

The game can be played in several ways over the network. The Steam version has an extra Internet multiplayer lobby that replaces the GPGNet lobby. (See section [Multiplayer](#), GPGNet is offline now.) Via LAN you can connect with direct IP *and* port input. The game allows you to either choose the port randomly when opening a server, or to set it yourself. What doesn't work is players using the steam version and DVD version in one game. Both sides can't see each other or connect to each other. The game doesn't give an error message, but the connection just doesn't work. Similarly, a connection via the Internet (without [VPN](#)) does not work, despite port forwarding.

For a network game, FA requires the specified port and 15000 (UDP) to be allowed in a possible firewall.
