

Turn off Windows Scaling

Some games exhibit strange behavior under Windows, if the operating system is controlling its scaling. An example is [Xonotic](#), where you cannot use full 4K resolution, if Windows controls its scaling. In order to turn this off, simply open the properties of the game's binary and select the **Compatibility** tab.

Clicking on the Button **Change high DPI settings** opens the following Window:

Select the checkbox next to **Override high DPI scaling behavior.** and select **Application.** This makes the game do the scaling, which can solve problems for some games.
