## Multi-Player Information

## Game Info

Star Trek Voyager Eliteforce is a beautiful first person shooter, thematically located in the Star Trek Voyager universe. It was developed by [Raven Software](#), published by [Activision](#) on 20<sup>th</sup> of September 2000. The game was released for Windows, Linux, MacOS and even Playstation 2. On 9<sup>th</sup> of September 2021, so roughly 21 years later, to honor the occasion of 55 years of Star Trek, the game got re-released on [GOG](#). This however, only includes the Windows version.

The game is based on the [Quake III Arena](#) engine, which means that many of the things said here also apply to Quake 3 Arena. It also works the other way around. The game itself is divided into the single-player and the „Holomatch“, i.e. the multi-player. Everything that is written here applies primarily to the Holomatch. However, most of the commands and settings can be applied to both equally, or have an effect on both (e.g. the [brightness settings](#)).

Here are some first impressions of the game's gameplay:

- [DM](#)
- [CTF](#)
- [Let's Play of the campaign](#)

## Purchasing

After a [law suit](#) Star Trek games from Activision were no longer be distributed for quite some time. In

the meantime however, EF 1 is available via [GOG](#) once again.

## System requirements

### Minimum system requirements

- Windows® 95, 98, 98 SE, NT 4.0 SP5, or Windows 2000 with 100% compatible Computer System
- 3-D hardware accelerator with full OpenGL® support
- Pentium 233 MHz MMX® processor and 8 MB video card or Pentium II 266 MHz MMX® processor with 4 MB video card or AMD® 350 MHz K6®-2 processor with 4 MB video card
- 64 MB RAM
- Quad-speed CD-ROM drive (min. 600 kB/sec transfer rate)
- DirectX 7.0a or higher
- Modem or network card for the multi-player

### Recommended system configuration

- Windows® 95, 98, 98 SE, NT 4.0 SP5, or Windows 2000 with 100% compatible Computer System
- 3-D hardware accelerator with full OpenGL® support
- Pentium II 300 MHz MMX® processor (or faster) with 16 MB graphics card
- 64 MB RAM (or more)
- Quad-speed CD-ROM drive (min. 600 kB/sec transfer rate)
- DirectX 7.1 or higher
- Three-button mouse with mouse wheel

### Mac requirements

- G3 or G4 processor with 266 MHz or faster
- 64 MB RAM
- PCI or AGP 3D accelerator graphics card with at least 6 MB VRAM and Apple OpenGL version 1.1.2 or higher
- 560 MB of uncompressed disk space (more disk space required for virtual storage)
- At least 128 MB of virtual memory
- MacOS 8.6 or higher
- 4x CD-ROM
- Internet (TCP/IP) and LAN (TCP/IP) multi-player supported
- Internet multi-player requires at least a 28.8 kbit/s modem

## Versions

There are a number of versions of this game, ranging from Raven Software's original versions to newer, ioQuake3 based versions. See [Versions](#) on more details.

## Setting up EF

Sometimes getting the game to run can be challenging. See [Setting Up EF](#) for help with that.

## EF Settings and Configuration

The game can be configured quite extensively. See [Configuration](#) on the subject.

## Custom Content and Settings

The game allows for adding custom content. See [Custom Content and Settings](#) on the matter.

## Known Problems and Troubleshooting

Sometimes problems are of a more complicated nature. For help with those cases see [Known Problems](#).

## Game Play

There is a number of articles on the game play of EF 1. See [Game Play](#) for an overview of them.

## Abbreviations

The following abbreviations are specifically interesting in context of EF 1:

- CTF = [Capture the Flag](#)
- FFA = Free For All (= [Deathmatch](#))
- TDM = [Team Deathmatch](#)
- PIN = [Pinball](#)
- DISI = Disintegration (= [Instagib](#))

## Commands in the Game

There are a number of console commands, that control the game, resp. the game server. See [In-Game Commands](#) for an overview.

# Setting Up Game Servers

At any time EF 1 allows for rather simple and convenient setup of game servers (hosting matches) as well as rather detailed configuration of more advanced server properties. See [Setting Up Game Servers](#) on how to do that.

## Network

### Net Settings

Network performance can be improved when adapting the standard net settings. See [Net Settings](#) on the matter.

### Master Servers

The game utilizes so-called master servers to advertise and find game servers. See [Master Servers](#) on the subject.

### Map Downloads

The game allows for in-game downloads of maps. These can be accelerated. See [Map Downloads](#) on the matter. The article also helps solving some minor problems with map downloads.

### Ports

In addition to the ports 27960-27963 (UDP), ports 26000, 27500 and 27910 (UDP) could also be used.
